

HOOKLIFT

The Hooklift vacuum unit is a flexible hire option for businesses that already operate hooklift trucks or need vacuum capability without adding another dedicated vehicle to the fleet. It is suited to liquid waste recovery, sludge removal, site clean-up and industrial work, giving crews practical vacuum performance that can be deployed when and where it is needed.

For hire customers, the Hooklift setup helps improve fleet flexibility and reduce downtime between jobs. The unit can be used for short-term projects, shutdown work, emergency clean-ups or extra capacity during busy periods. Simple operation, practical access and fast changeover help crews get working sooner and keep the job moving without unnecessary complication.
