

MUDVAC 10000

The MudVac 10000 is a tough hire solution for customers dealing with mud, slurry, sludge and wet waste recovery. It is well suited to civil, drilling, construction, industrial and site clean-up work where crews need a practical unit that can handle messy material without turning the job into a long day of headaches.

For hire customers, the MudVac 10000 helps add serious recovery capacity when project demand increases, equipment is down or a short-term job needs the right gear fast. Its simple operation, strong vacuum performance and full-opening rear door help crews load, recover, discharge and clean out more efficiently, saving time on site and keeping the job moving.

SPECIFICATIONS

Model	MudVac 10000
Capacity	10,000L
Size	6x4
Cab Chassis	Volvo
Vacuum Pump	1,000 m ³ /h - 600 CFM liquid ring vacuum pump, hydraulically driven
Engine	Volvo FE 350 HP 6x4 with I-Shift
Extras	Volvo Connect app provides vehicle performance and tracking data
