

TRIVAC

The TriVac is a high-capacity hire solution for customers needing bulk liquid waste recovery and transport. It is well suited to industrial sites, shutdowns, council work, regional projects and larger waste recovery jobs where volume matters and operators need equipment that can handle serious loads efficiently.

For hire customers, the TriVac helps reduce the number of trips between site and disposal point, saving time, fuel and unnecessary travel. With large holding capacity, self-contained vacuum and hydraulic systems, and simple operation, it gives crews a practical way to move more waste with fewer interruptions. Big capacity. Less road time. More productive work.

SPECIFICATIONS

Model	TriVac
Capacity	24,000L
